## SUMMARY

Software Developer with hands-on experience building and maintaining web applications using TypeScript, JavaScript, React.js, Next.js, Spring Boot, GraphQL, and REST. Contributes across development, testing, documentation, code reviews, and CI/CD workflows, with a focus on reliable software and clear technical communication. Brings experience improving product functionality, debugging critical issues, and supporting consistent development practices.

## TECHNICAL SKILLS

|              |                                                                                           |
|--------------|-------------------------------------------------------------------------------------------|
| Languages    | TypeScript, JavaScript, Java, Python, HTML, CSS, SQL                                      |
| Frameworks   | React, Next, Vue, React Native, Express, Node, Spring Boot, Prisma, Prisma, Drizzle, TRPC |
| Technologies | MongoDB, PostgreSQL, Neo4j, Stripe, Clerk, GraphQL, REST, AWS                             |
| Tools        | Git, Linux, Docker, Expo, Figma, Cursor, ChatGPT, Eraser, Vim, Claude Code                |

## WORK EXPERIENCE

Zebra Robotics | Robotics Instructor (part-time)

September 2024 - Present

- Set up organized code templates and testing steps, enabling students to follow a consistent development process and avoid common setup mistakes.
- Added basic software engineering concepts, like breaking problems into smaller parts and handling inputs/outputs, to help students build stronger foundations

Airble Aviation | Full-Stack Developer Intern

Jan 2023 - Dec 2023

- Created Confluence documentation highlighting Segment implementation, reducing onboarding time for new engineers and supporting clearer collaboration.
- Refactored React and TypeScript UI components, improving SEO performance by 15% and enhancing cross-browser consistency.
- Optimized GraphQL APIs and MySQL queries for flight data, eliminating duplicate records and improving data reliability.
- Integrated Segment CDP into the marketplace product, improving tracking accuracy in Google Analytics and Google Ads by 25%.

Benevity | Software Developer Intern

May 2022 - Sept 2022

- Built a global content-prioritization feature with Vue.js that cut time spent organizing by 20%.
- Collaborated using Git-based workflows in Bitbucket, performed code reviews, and maintained documentation in an Agile environment, improving code quality and reducing integration errors.
- Utilized Cypress, Jest, and Storybook to develop CI/CD testing and support production deployment, saving the team 4 weeks of sprint time.

## PROJECTS

Spair | Next.js, Postgres, Redis, Upstash Vector, AI SDK, Clerk, PostHog, TRPC

www.spair.app

- Build an end-to-end RAG study assistant that retrieves from user-uploaded notes and streams answers with citations.
- Designed async file-processing and generation workflows to handle long-running AI/parse jobs reliably in serverless.
- Delivered product surface area beyond the AI core with billing and analytics using PostHog.
- Architected a typed API layer with tRPC + TanStack Query for content, chats, flashcards, and billing, backed by Prisma/PostgreSQL with Zod-validated models.

## EDUCATION

|                                                                          |                        |
|--------------------------------------------------------------------------|------------------------|
| Douglas College - Associate's in Computing Studies & Information Systems | Jan 2020 - Jun 2024    |
| Thompson Rivers University - Bachelor of Computer Science                | Jan 2024 - August 2025 |
